

SAM-ASP

The SAM system was designed to make aircraft maintenance - time saving and cost effective, requiring as little effort as possible to use.

Taken the idea of relieving you from unnecessary time spending and costs, we can offer you **SAM as an ASP solution**. ASP stands for "Application Service Providing" which means that we work as your IT Department with regard to your aircraft maintenance software. Your SAM application will simply be installed and run on one of our strong and reliable servers, and you connect to it through a network.

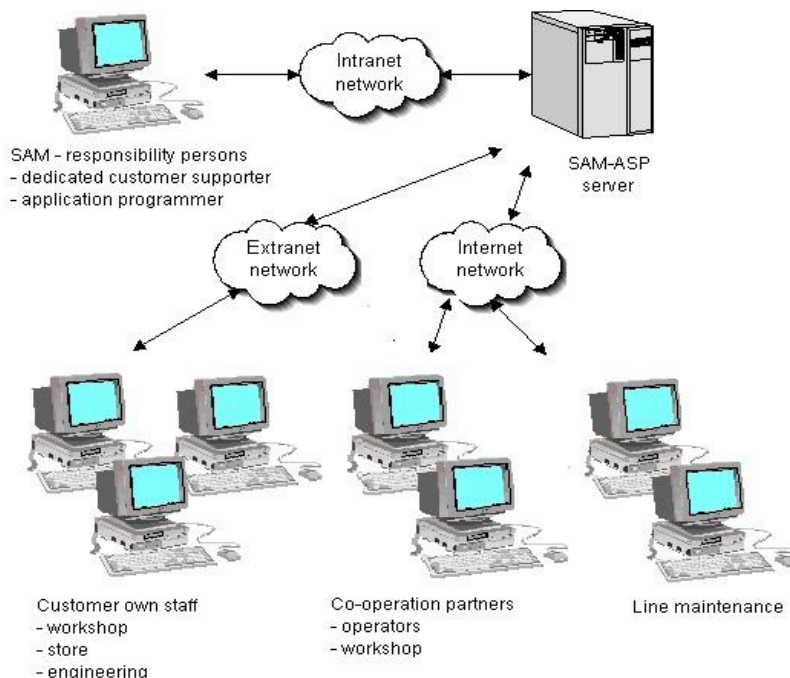

You do not buy the SAM system, you simply use it.

The advantages of the ASP Solution are unique:

- We take over the full responsibility for managing the hardware
- The software is always up to date
- Back-ups are made on a daily basis
- Your data are available 24 hours a day, 365 days a year
- You do not have any investment outlay in additional hardware and software
- Your data can be accessed globally from computers with an Internet connection
- Support is easy and problem solving can be done quickly
- Your data are secured with the newest antivirus and firewall facilities

The price of the SAM-ASP Solution is mainly based on how much you use it (**flight hours recorded**). That means if your operations are running low so would your need for maintenance. The pricing mechanism of the SAM ASP Solution reflects this fluctuation.

If you want to get up running on the SAM System fast and easy the SAM-ASP solution would definitely be the choice for you.

With SAM-ASP you are well prepared for the future, where your company can change or grow without spending your money in additional Software and Hardware
